

## Technical Test:

To evaluate your technical ability, please use two hours to go through this test, completing as much of the tests as you can.

You can pick any technology, approach and language you feel the most comfortable with.

Please document your code, explaining your approach/thinking behind your solution, and any needed items to make it run.

After you are done with the exercise, please upload it to github/bitbucket or any other public code repository, and send the link to the code to [jonas@kano.me](mailto:jonas@kano.me)

### Test 1:

Using Kano.me - Add a computer kit bundle and see that it is correctly in the basket, with the correct information.

### Test2:

Using Kano.me - Change to another country, Add a computer kit bundle and see that it is correctly in the basket with the correct information

### Test3:

Using <https://world.kano.me/projects> - Check the menu is correct with (World, Make, Shop, etc), and that the following information is present in the footer (Connected Kanos, Online Today, Lines of code, Creations shared)

### Test 4:

Using [world.kano.me](https://world.kano.me) click the kano gives you superpowers, and go through our onboarding flow. - This might be a harder challenge, if not able to complete it with code please write what approach you would do it with.
